3 Report Purpose 1

4 Functional Requirements Evaluation 1

4.1 Image Import and Export (R1 and R6) . . . 1

4.1.1 T1: Test import for PNG/JPG/BMP format (R1) . . . 1

4.1.2 T2: Test PNG Image Export (R6) . . . 1

4.2 Spot Profile and Imaging Parameters (R2, R3, R4, and R5) . . . 1

4.2.1 T3: Spot Width and Height - Exact-sampling (R2 and R5) . . . 1

4.2.2 T4: Spot Width and Height - Under-sampling (R2 and R5) . . . 3

4.2.3 T5: Spot Width and Height - Over-sampling (R2 and R5) . . . 4

4.2.4 T6: Spot Rotation - Astigmatism (R2 and R5) . . . 4

4.2.5 T7: Raster Grid / Pixel Size (R3 and R5) . . . 4

4.2.6 T8: Subregion / ROI (R4 and R5) . . . 5

4.2.7 T9: Ground Truth Reproduction (R1, R2, R3, and R6) . . . 5

4.3 Image Quality Metric (R7) . . . 6

4.3.1 T10: High metric value (approximate to exact-sampling) . . . 7

4.3.2 T11: Low metric value (under-sampling) . . . 7

4.3.3 T12: Low metric value (over-sampling) . . . 7

4.3.4 T13: Control metric value . . . 7

5 Nonfunctional Requirements Evaluation 11

5.1 Usability . . . 11

5.1.1 T14 . . . 11

5.2 Accuracy . . . 11

5.2.1 T15 . . . 11

5.3 Maintainability . . . 11

5.3.1 T16 . . . 11

5.3.2 T17 . . . 11

5.4 Portability . . . 11

5.4.1 T18 . . . 11

6 Comparison to Existing Implementation 12

7 Unit Testing 12

List of Tables

List of Figures

1 An example loaded test image. 2
2 The image was faithfully reproduced (in grayscale with some imaging parameters change for clarity). 2
3 The ground truth image used for testing with the subregion set to cover the entire image. 3
4 The spot layout and resulting image matching the expected test result: Spot size of 100 by 100%. 3
5 The spot layout and resulting image matching the expected test result: Spot size of 10 by 10%. 4
6 The spot layout and resulting image matching the expected test result: Spot size of 500 by 500%. 4
7 The spot layout and resulting image matching the expected test result: Spot size of 60 by 500% at 45 degrees rotation. 5
8 The spot layout and resulting image matching the expected test result: an 8 by 8 pixel image. 5
9 The spot layout, subregion, and resulting image matching the expected test result. 6
10 The expected test result: the ground image and resulting image are visually identical. 7
11 The spot layout, spot profile, subregion, and resulting image with a score equal or greater to the expected test result of a “0.8501” minimum. 8
12 The spot layout, spot profile, subregion, and resulting image with a score less or equal to the expected test result of a “0.8501” maximum. 8
13 The spot layout, spot profile, subregion, and resulting image with a score less or equal to the expected test result of a “0.8501” maximum. 9

14 The spot layout, spot profile, subregion, and resulting image with a score greater or equal to the expected test result of a “0.9500” minimum. 10

3 Report Purpose

This purpose of this report is to document the tasks accomplished and testing results as part the verification and validation process of ImgBeamer as laid out in the VnV Plan [4]. The code documentation along with notes on developer setup and testing is available at: https://joedf.github.io/ImgBeamer/jsdocs/index.html The software design documentation is available at: https://github.com/joedf/CAS741_w23. The source code is available at: https://github.com/joedf/ImgBeamer/tree/cas741

4 Functional Requirements Evaluation

In this section, we report the measures that were taken to evaluate whether the functional requirements (as listed in the SRS [3]) were met. Most of these tests were executed manually due to the complex nature of visual information, GUI testing, and the subjectivity of image quality.

4.1 Image Import and Export (R1 and R6)

This section is focused on testing the image import and export functionalities.

4.1.1 T1: Test import for PNG/JPG/BMP format (R1)

The software could successfully load or import valid (non-corrupt) images files in the PNG, JPG, and BMP formats. An example is shown in figure 1.

4.1.2 T2: Test PNG Image Export (R6)

The software could successfully export valid PNG image files of the resulting image (see figure 2).

4.2 Spot Profile and Imaging Parameters (R2, R3, R4, and R5)

This section focuses on testing the sampling and image rendering based on the given imaging parameters and subregion / ROI. The ground truth / input image used for these tests is depicted in figure 3 with the cyan overlay depicting the subregion area.

4.2.1 T3: Spot Width and Height - Exact-sampling (R2 and R5)

The test was passed as shown in figure 4.

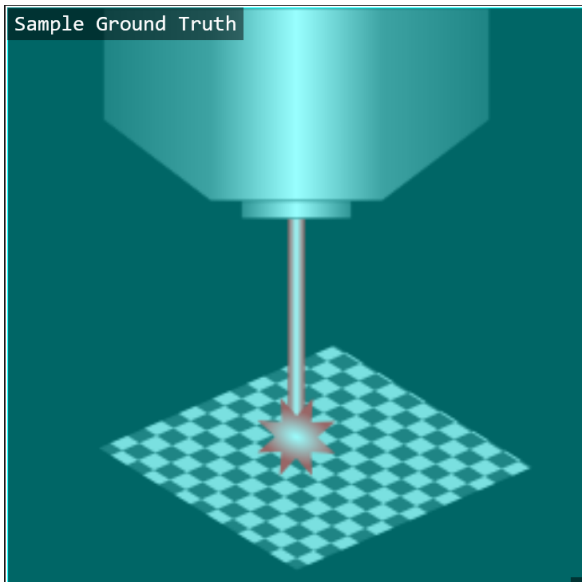

Figure 1: An example loaded test image.

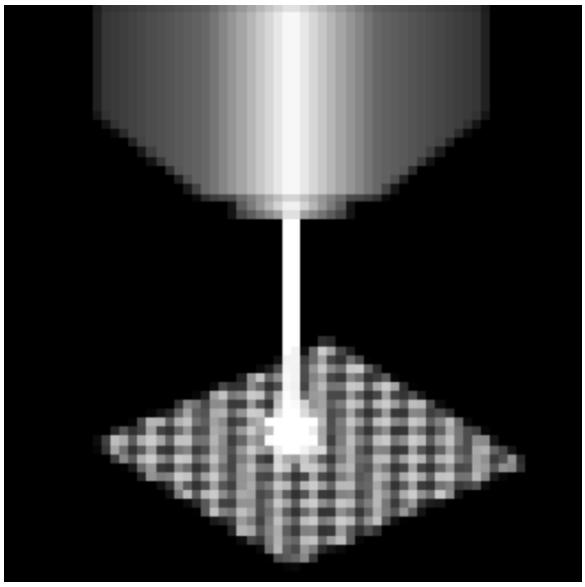

Figure 2: The image was faithfully reproduced (in grayscale with some imaging parameters change for clarity).

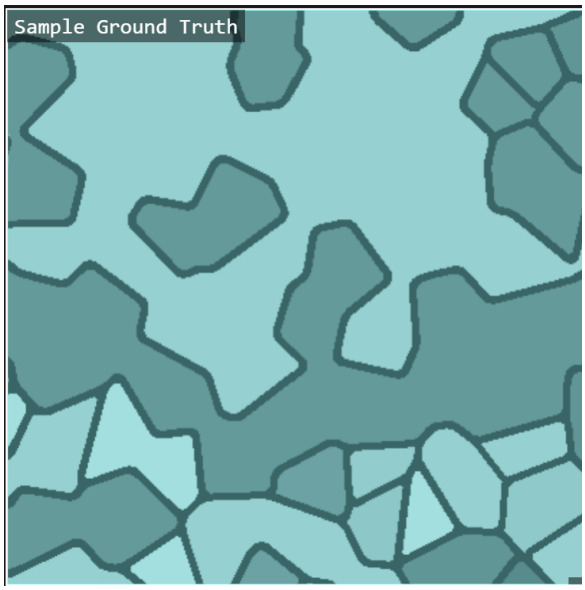

Figure 3: The ground truth image used for testing with the subregion set to cover the entire image.

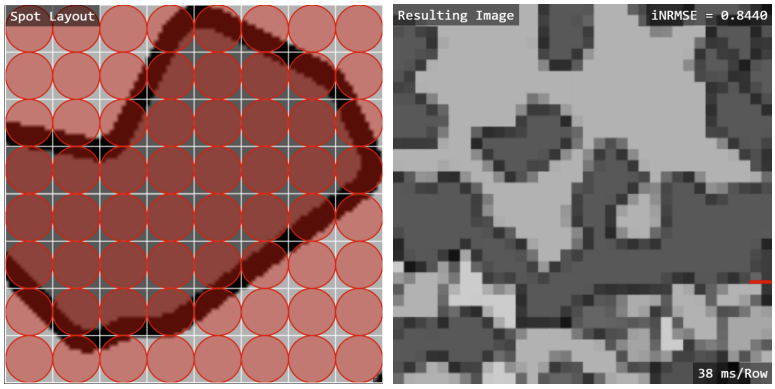

Figure 4: The spot layout and resulting image matching the expected test result: Spot size of 100 by 100%.

4.2.2 T4: Spot Width and Height - Under-sampling (R2 and R5)

The test was passed as shown in figure 5.

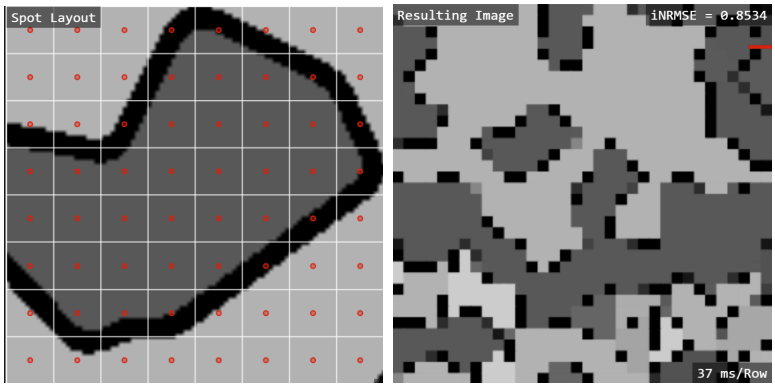

Figure 5: The spot layout and resulting image matching the expected test result: Spot size of 10 by 10%.

4.2.3 T5: Spot Width and Height - Over-sampling (R2 and R5)

The test was passed as shown in figure 6.

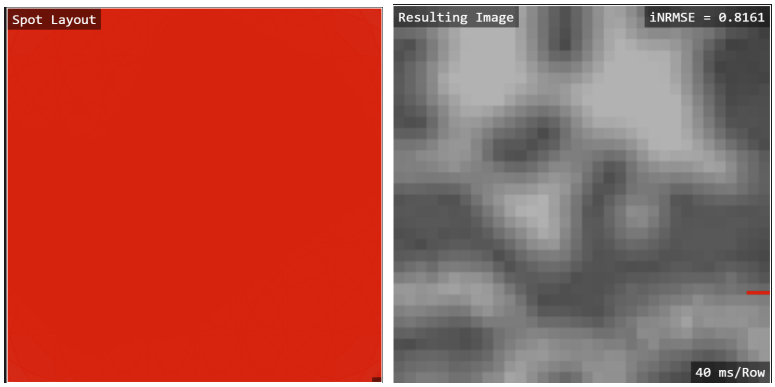

Figure 6: The spot layout and resulting image matching the expected test result: Spot size of 500 by 500%.

4.2.4 T6: Spot Rotation - Astigmatism (R2 and R5)

The test was passed as shown in figure 7.

4.2.5 T7: Raster Grid / Pixel Size (R3 and R5)

The test was passed as shown in figure 8.

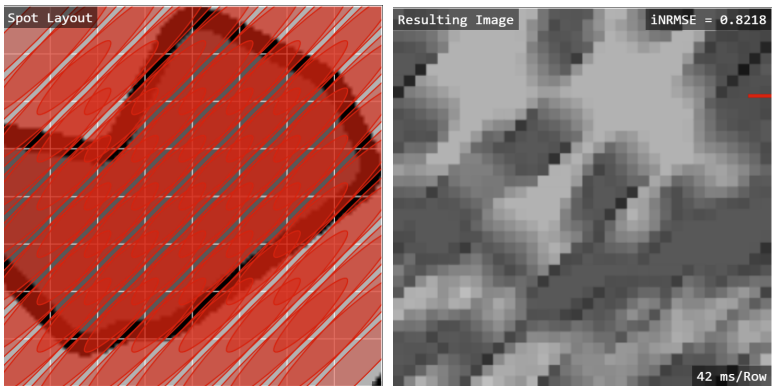

Figure 7: The spot layout and resulting image matching the expected test result: Spot size of 60 by 500% at 45 degrees rotation.

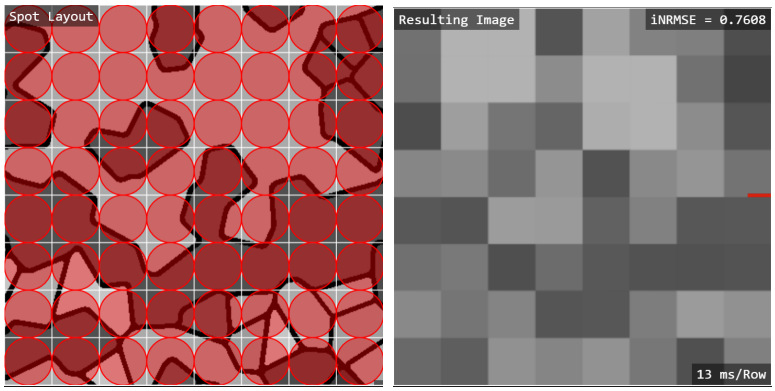

Figure 8: The spot layout and resulting image matching the expected test result: an 8 by 8 pixel image.

4.2.6 T8: Subregion / ROI (R4 and R5)

The test was passed as shown in figure 9.

4.2.7 T9: Ground Truth Reproduction (R1, R2, R3, and R6)

The test was passed as shown in figure 10.

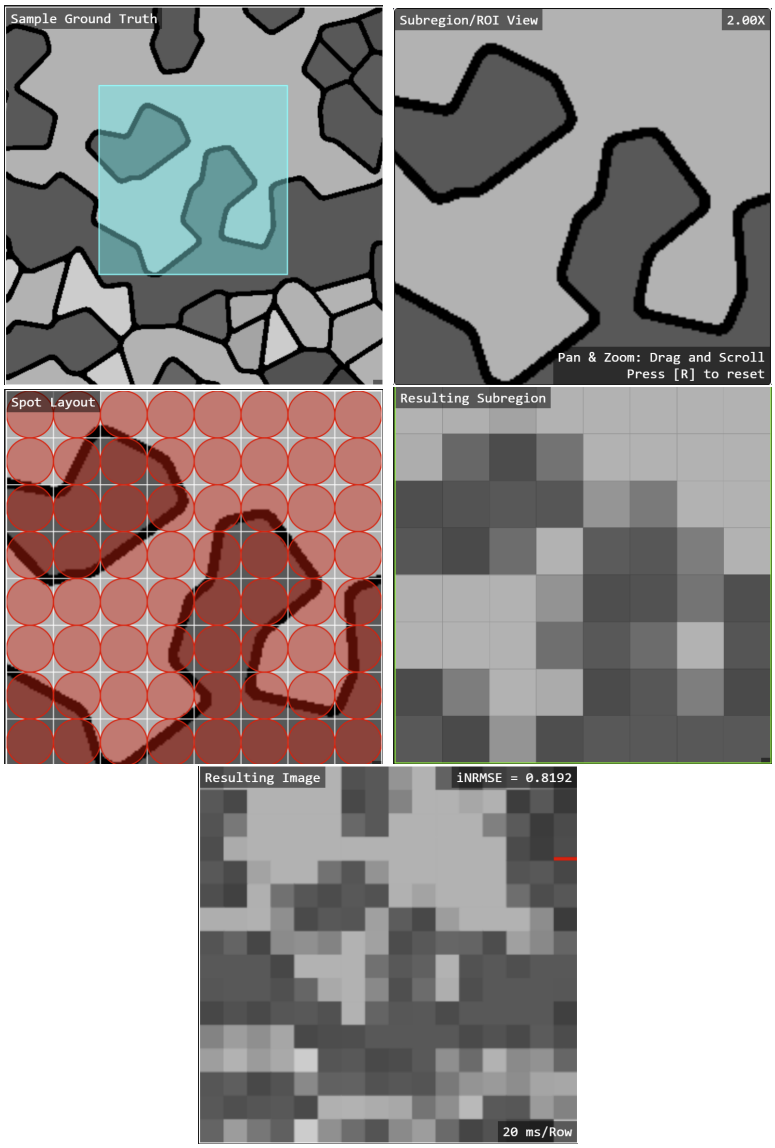

Figure 9: The spot layout, subregion, and resulting image matching the expected test result.

4.3 Image Quality Metric (R7)

This section focuses on testing the image quality metric general cases. Naturally, this is no flawless or foolproof image quality metric. Over 20 different image metrics (some with a reference image and some without a reference) have been reviewed and compared by Jagalingam and Hegde in a 2015 paper, each with their different

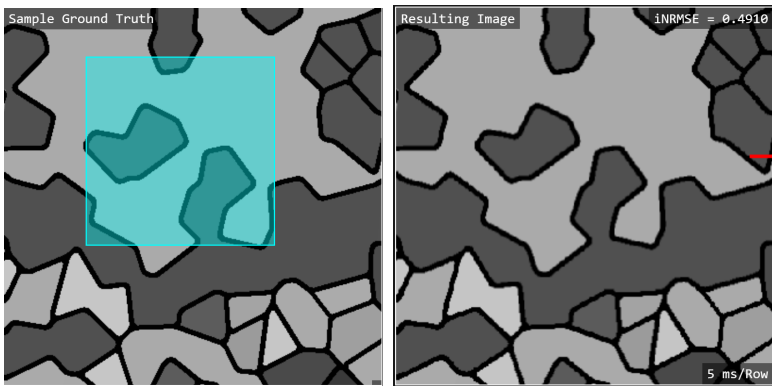

Figure 10: The expected test result: the ground image and resulting image are visually identical.

strengths and weaknesses [5].

4.3.1 T10: High metric value (approximate to exact-sampling)

The test was passed as shown in figure 11.

4.3.2 T11: Low metric value (under-sampling)

The test was passed as shown in figure 12.

4.3.3 T12: Low metric value (over-sampling)

The test was passed as shown in figure 14.

4.3.4 T13: Control metric value

The test was passed as shown in figure 14.

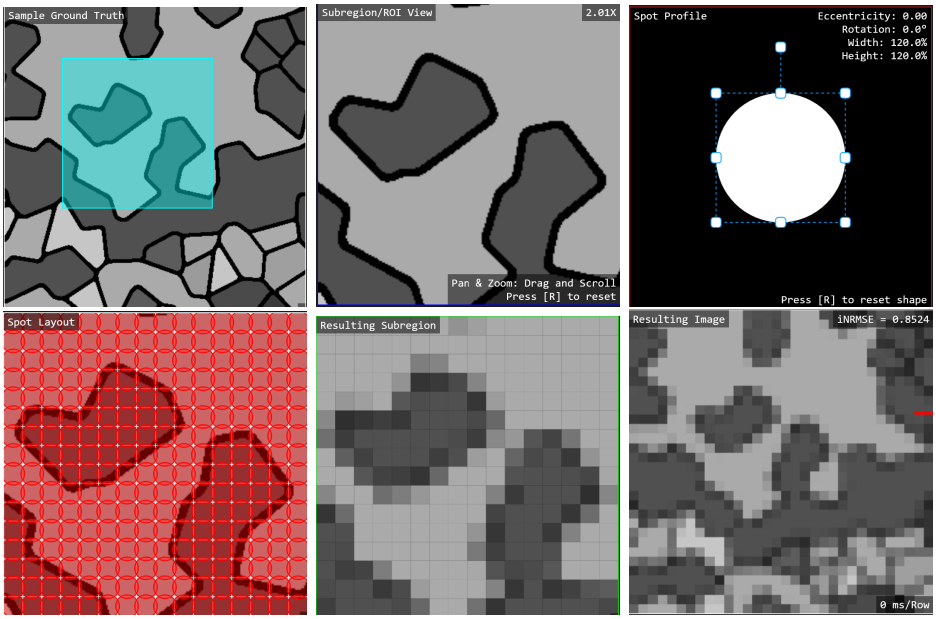

Figure 11: The spot layout, spot profile, subregion, and resulting image with a score equal or greater to the expected test result of a “0.8501” minimum.

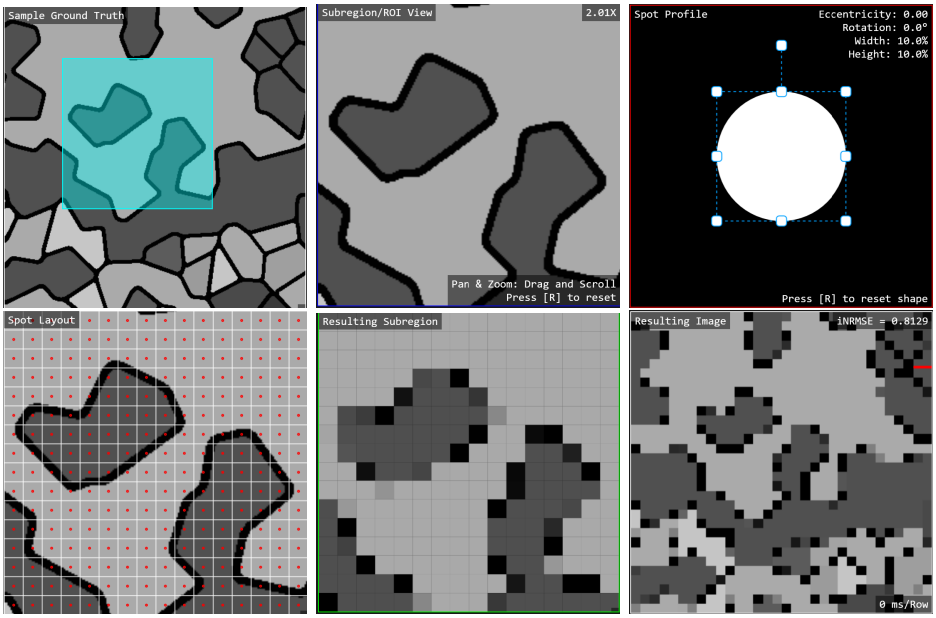

Figure 12: The spot layout, spot profile, subregion, and resulting image with a score less or equal to the expected test result of a “0.8501” maximum.

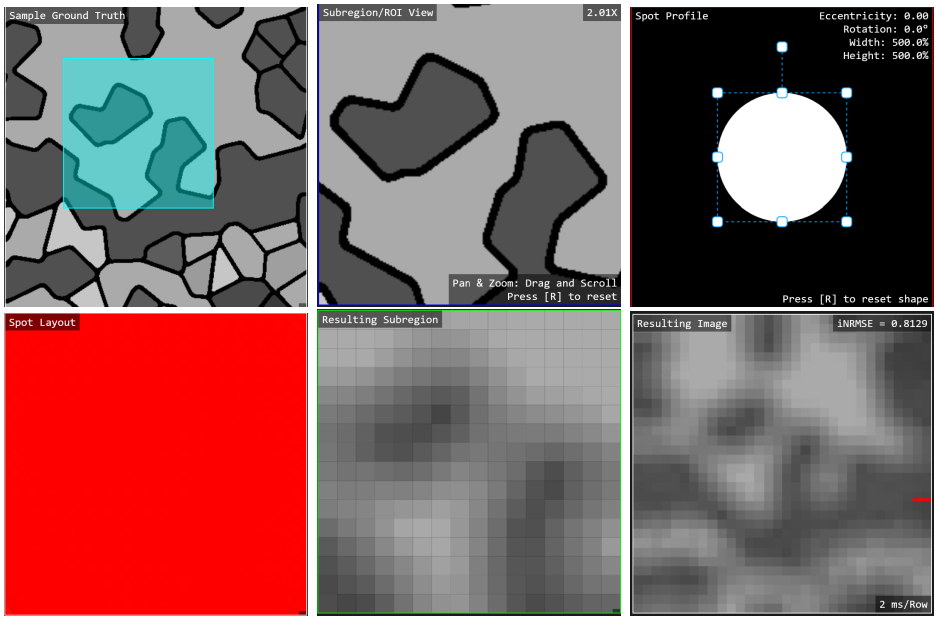

Figure 13: The spot layout, spot profile, subregion, and resulting image with a score less or equal to the expected test result of a “0.8501” maximum.

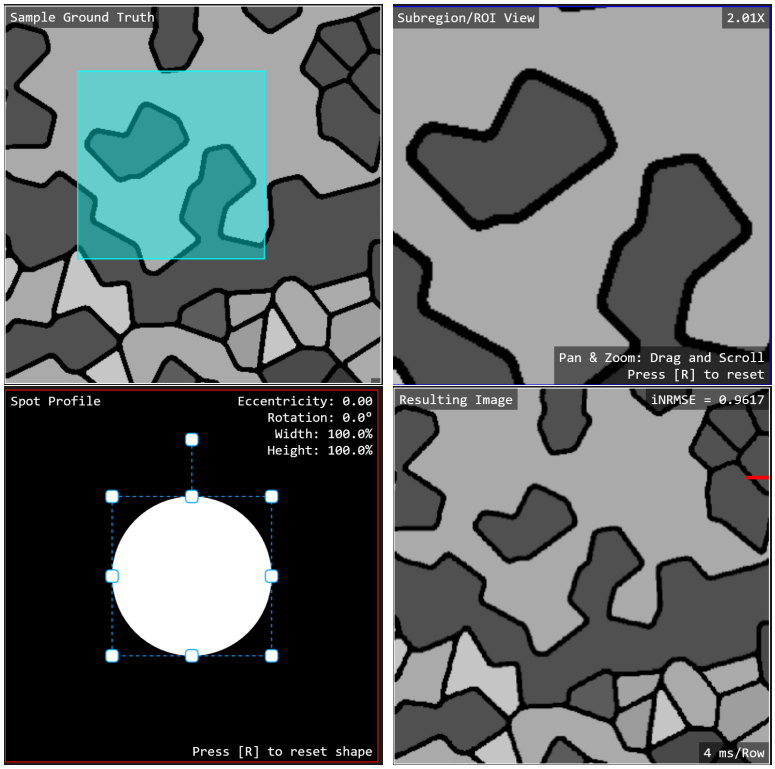

Figure 14: The spot layout, spot profile, subregion, and resulting image with a score greater or equal to the expected test result of a “0.9500” minimum.

6 Comparison to Existing Implementation

This section will not be appropriate for every project.

7 Unit Testing

8 Changes Due to Testing

1. The passing value for T13 (see 4.3.4) had to be changed from "0.9800" to '0.9500' since the resulting images look identical. The resulting value of '0.9617' seemed satisfactory and the original expected test value was perhaps too constrained.
